1. Claim 50 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The first line of claim 50 is incomplete; therefore, the claim is incapable of being understood.

2. Claims 1-119 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Applicants have failed to provide support for claiming that the polymerizate is non-elastomeric. The examiner has reviewed the specification and finds no support for the amendments to independent claims 1, 35, and 69. Furthermore, it follows that applicants have failed to adequately define what is meant by “non-elastomeric” and have failed to delineate how or what properties are governed by the language. It is noted that applicants have disclosed at page 22, line 13 that flexibilizing additives may be incorporated within the composition; therefore, it is logical to conclude that applicants envisioned the compositions having a degree of flexibility or elasticity. This position serves to reinforce the position that the meaning of applicants’ amended language is unclear, since “non-elastomeric” excludes all elastomeric properties, such as flexibility or elasticity.

3. Claims 1-119 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

All polythiourethanes have some degree of flexibility or elasticity; however, applicants have failed to provide enablement for the production of polythiourethanes lacking all elastomeric properties. By teaching that flexibilizing additives may be utilized within the composition at page 22 of the specification, applicants have in fact taught how to enhance elastomeric properties, rather than eliminate them.

4. The prior art rejection has been withdrawn in view of applicants' arguments and amendment.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 1711

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
